

Clarity Techworks

INDUSTRY TALK WEBINAR CLARITY TECHWORKS SDN BHD

1 Executive Summary

This poster summarizes key insights from a career talk by Clarity Techworks, a fintech company specializing in Web3 and blockchain payment solutions. The session explained how modern ICT roles especially Android Developers contribute directly to real-world financial systems. It also highlighted industry tools, workplace culture, technical expectations, and the importance of soft skills in professional life.

2 Introduction

The career talk highlighted Clarity Techworks and their flagship product, Rapidz Pay, a decentralized payment ecosystem designed for both consumers and merchants. The speaker shared how ICT professionals play a key role in connecting traditional finance with digital assets through mobile apps, dashboards, and blockchain technology. The session also emphasized how ICT graduates can better prepare themselves for real-world industry roles.

3 Content of the talk

• Overview of Clarity

Techworks and Rapidz Pay

Clarity Techworks is a Fintech company specializing in fusing traditional finance with blockchain technology. The key product, Rapidz Pay, is a digital payment ecosystem. It allows:

- Users to store and send cryptocurrencies with a mobile wallet (B2C).
- Merchants to accept crypto payments using a cashier app and web dashboard.

This demonstrates how ICT is used to design practical systems that are able to securely manipulate money, users, or businesses.

• ICT Roles in Fintech and Web3 Ecosystems

In a financial technology and Web 3 industry, ICT professionals will do more than simple programming. They will:

- Develop Mobile Apps, Websites & Data Dashboards.
- Connect system to blockchain network.
- Data and financial transaction security.
- Guarantee smooth usage of apps across the globe.

This brings us back to how ICT jobs are crucial in developing digital ecosystems that support today's industries, such as finance, e-commerce, or crypto.

• Agile/SCRUM Workflow in Real Companies

Clarity Techworks utilizes an Agile/SCRUM approach for effective management of projects, which entails:

- The work is divided into 2-week sprints
- They hold a daily stand-up meeting to share their progress
- They plan, review, and improve their work regularly

The system can enable faster collaboration, better communication, and flexibility in adapting to changes, which is extremely critical in dynamic businesses like fintech and Web3.

• Android Developer

Responsibilities and Tools

An Android Developer at Clarity Techworks, who develops the Rapidz Pay app, has several duties:

- New features creation
- Bug Fixing and Improvement of Performance
- Monitoring Crashes and User Behavior

They use professional tools, such as:

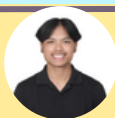

- Android Studio : to write and test the code
- Firebase: For monitoring crashes or sending notifications.
- Postman : to test how the app talks to the backend
- Bitbucket : to manage and share code

4 Reflection

This career talk showed me that ICT is not only about coding, but about building real systems that people and businesses depend on every day. I learned that ICT professionals play a meaningful role in industry by creating secure and efficient platforms that handle real transactions, trust, and user experience—especially in fintech and blockchain. The session also motivated me to become a more independent learner, because technology changes quickly and ICT graduates must continuously improve their skills. Overall, it inspired me to take my studies more seriously and start building projects to prepare for real-world roles.
